General Description

The surface of this Township especially in the S. Eastern and North Eastern parts is much broken by Canons & Ravines many of which contain Cedar in small quantities with occasional Clumps of Ash and Elem & Cotton wood. The bed of the Uplands is Clay & Sand but water is scarce except in wet seasons. When innumerable basins collect the surface water

General Description

The Southern part of this Township is high table land broken in S W corner by ravines and canons, but the soil is of good quality & deep

The Northern portion is sandy hillocks, swelling into quite high hills in the eteeme N. W. Water is scarce now but surface ponds being found. A few of the canons contain some cedar, which is the only timber of any consequence
