August 14th 1872

Township 1 North Range 35 West of the 6th P. Mer.

General Description

The Surface of the land in this Township is high rolling Prairie with many large ravines running from the South to the North generally very deep.

The Soil is from 6 to 8 inches deep and some what sandy I think this land would produce good crops but of a dry season Irrigation would be necessary which could be done by Sinking wells from 50 to 60 feet deep and erecting Wind Mills to raise the water there is some water in Pools in Mosquito creek which would afford water for Stock there is also some timber along the creek. grass in this Township is Excellent for Stock raising

August 21st 1872

Township 2 North, Range 35 West of 6th Mer.

General Description

The land in this Township is generally rolling, high prairie.

The soil is somewhat sandy. With the aid of large wells and wind-mills to raise the water for irrigating purposes, the up-lands can be brought into successful cultivation.

This soil will produce corn, and the other cereal grains can be raised without irrigation, as the first part of the season is attended with sufficient rains

The bottom lands are generally sufficiently low to to be exempt from drouth.

The banks of the Republican are low. It's bed is sandy, and the water at the usual stage is about two feet deep, but runs entirely clear.

There is no timber of note along this river, in this Township.

Camp Creek enters Sec. 4, 5, 6, 7, 9 10, 11 and 13 and flows into the Republican in Sec. 14. It is skirted with cotton wood and obstructed by beaver dams.

Stock-raising could be very successfully pursued in this locality, water and grass being so plentiful.

General Description

The land in this Township is high rolling Prairie:

There are numerous Ravines running from the North to the South: the land is good 2nd rate Farm land there is no running water in this Township and but little timber which is along a Dry (creek) in the western part of the Township: there is a large quantity of calcerous Sandstone in a ravine in Section (8) Eight, the Soil is from 6 to 8 inches deep composed of Sand and loam under laid with clay I think grain of all kinds can be produced in abundance here if there were seasonable Showers

The grass is short but good for Stock

General Description

The land in this Township is high level prairie Except the Eastern part which is broken by a large Ravine. In the Southern and Western parts of the township there are several low basins or sinks which hold water for some time after a Rain Most of the land can be Cultivated Successfully of a wet season and I think would yield good crops: Of a dry season, Irrigation would be necessary which can be done by Sinking wells and Erecting Wind mills Water can be reached by Going down from forty to Sixty feet the Soil is about Eight or ten Inches deep Clay of a Sandy Nature Class No 1
