Township No 25 N of Range 20 W of 6th P.M

General description of Township

The valley of the Calamus River is of the best character of soil black vegetable mould mixed with a sandy loam and is covered with a rich and luxuriant growth of native grasses standing nearly waist high—

The valley of a small creek in the E part named Barton creek is far more extensive than the valley of the Calamus and equally as fertile— for fine meadow and rich pasturage this valley may be equalled but not surpassed— the creek and marshes furnish plenty of clear cold water—

From the tests I made I believe these marshes to be solid peat beds— tried some taken from the bank and it burned like coal or more like "buffalo chips"—

Small fringes of willow skirt the creek and small lakes in the N.E part of Township—

the sand hills are not so high and broken as they are farther west but rise in well defined trends and are covered with a good growth of prairie grass— the intervening basins though small are of good soil

Township No 26 N of R 20 W of 6th P.M.

General description of Township

The main valleys extend into this Township from Town 25 - R 20 and are of the finest character of soil - Thousands of acres of the finest grass of the blue stem and broad blade and a kind of red top species wave in the summer breeze -

Most of it would yield from 2 to 3 tons per acre - Number of small springs jingle from the hillsides cool and sparkling -

Several small lakes of from 2 to 4 acres sparkle in the sun and deer and antelope abound in great numbers -

Experimented again upon what I term peat - it entirely burns with a clear bright heat - and if properly pressed and dried will furnish a plentiful supply of fuel that this country sadly needs

description continued

The upland are composed of sand and vegetable mould and are covered with good grass but rather short -

There are some of those glaring barren sandhills in the Township but by far the most of it is 1st rate soil

A few willows fringing the marshes constitute the timber

General Description

This Township with the exception of the dry valleys is composed of barren sand hills almost entirely devoid of vegetation —

The valleys are covered with a stinted growth of grass of poor quality

The Township has neither timber, water nor stone and its chief product seems to be grasshoppers which abound in countless millions
