General description

The Western & Southern part of the Township along the Valley of the Calamus River is of good quality and covered with fine native grasses the tall blue stem predominating —

The stream is clear and and rapid and averages about 3 ft deep

The uplands adjoining the valley are well adapted to grazing with a sandy loam for soil

The middle and Eastern part is composed of barren sand hills —

Neither timber nor stone in the Township —

To determine the proper adjustment for subdividing this Township of my compass I begin at the cor to Township No 27 ↑ 26 & 35 ↑ N range 20 & 21 and run on a bearing along township boundary of sec 36 N 43° 25' E

46.00 To 1/4 sec cor

80.00 Cor to sec 35 & 36

To retrace this line or run parallel thereto I found my compass in proper adjustment

General description

This Township is a wild waste of sand. The hills are of no particular direction but rather kettle bottom shape, some of them almost perpendicular and as one drags himself up the ascent he forms the idea that old "Lo! The poor Indian" got the best of it in the sale if he got anything for it —

Vegetation. bunch grass sage brush & sand cherries

Neither timber, water nor stone

One valley alone in the Township this is covered with a good growth of native grass. the soil of the valley though sandy is good
